Curriculum: Innovative Time-tabling & Exclusive Featured Programme

We make the most of the school time-table and provide flexible learning arrangements. Regular core programme will be delivered in the morning session, whereas **Featured Programme** and tutorial classes to cater for individual needs will be provided in the afternoon session. Moreover, after-school enrichment classes and extra-curricular activities will be organized.

Students are grouped according to their abilities for core programmes and tutorial classes that will minimize individual differences within the same classroom. This enables teachers to pitch their teaching at a level of difficulty suited to the ability of the class, so that students can learn more effectively.

突破傳統課時 創設特色課程

Learning with Fun 寓學於樂

Learning with Fun – Gaining Global Exposure

The school implements “**experience-based**” life-wide learning by making use of different social learning resources, such as outdoor activities, field trips, project learning and social visits. It provides more opportunities for students to study outside the classroom and also enables them to obtain valuable multi-learning experiences that are difficult to attain from campus.

Throughout the process of participating in the experiential learning programmes, students are encouraged to plan their own itineraries and take the initiative to explore more about the destinations. By observing and doing different tasks during the journey, it is hoped that new knowledge will be

acquired and relevant practical skills are gained. Besides, we will organize different overseas study exchange programmes and activities so that students can broaden their horizons by interacting with students around the world and experiencing various customs and cultures in a real-life context.
